

The L^AT_EX Document of All Time

Jay Shen

October 2024

1 A wild graph appears!

1.1 The plot thickens

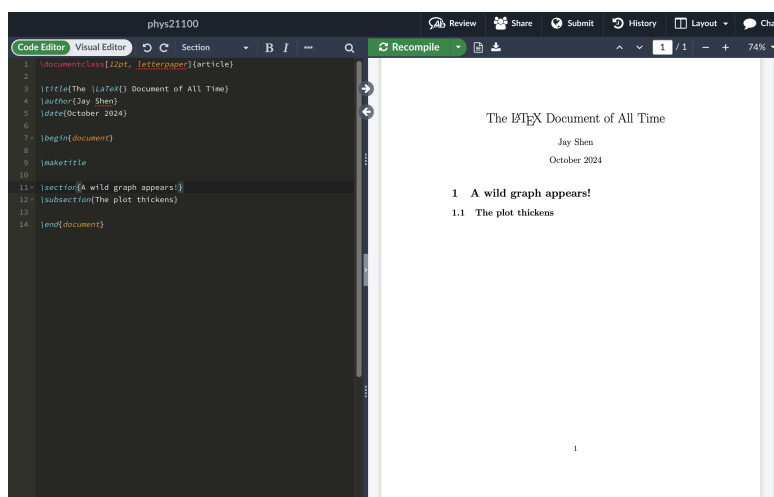

Figure 1: My Overleaf screen right now.

I just referenced the hell out of Figure 1.

2 Why seven ate nine

Woah, look at this $\rightarrow \hbar$.

Seven ate nine because 9 is 3^2 . Ha ha.

Fun fact:

$$\int_0^1 1dx = 1 \tag{1}$$

Equation 1 is no longer label-less thanks to me.

3 Your table is right this way

A	B	C	D
1	2	3	4
5	6	7	8

Table 1: Nice table dude.

Table 1 has been blessed with its very own label. I'm a goddamn labeling machine.
